

23rd Asia Pacific Optometric Congress

The 23rd APOC (Optometry) conference, a 3-day event held from 2-4th June 2023 in Delhi, drew delegates from across Asia. The conference commenced with speakers sharing advancements in optometry. Notably, the faculties of Laxmi College of Optometry took the spotlight on day one, presenting their thesis on binocular vision under the guidance of Dr. Vidyut Rajhans. Additionally, they also showcased posters on blue block lenses and the challenges encountered in school screening, securing the 2nd and 3rd place for their presentations.

The second day featured clinical optometrists discussing a low vision research study, while the evening concluded on a musical note with an orchestra performance by the blind. Wrapping up the event on the final day, Dr. Vidyut Rajhans enlightened everyone with an engaging talk on "AI Augmenting Optometry Practice: Present State and Future Directions."
